LAB - Instructions

We learn SQL only be doing. To facilitate that, we take a two pronged approach - Guided Labs and Unguided Lab Assignments.

Guided Labs: In each lab we introduce a new concept in SQL and workout few examples.

Unguided Labs: You will be provided a description of what needs to be done and you will need to use the skills learnt in guided labs to finish these assignments.

There are 100+ guided labs that you will need to practice over and over again to master the concepts. Complete unguided assignments and submit them for review.

LAB Environment Setup

1. If you are using your own laptop or desktop and if you do not have an existing SQL Server installation on your machine, complete LAB01 to install SQL Server.
2. If you have an existing SQL Server setup on your machine or if you intend to SQLFiddle website, Skip LAB01 (installation) and proceed to LAB02 to install the sample database.
